

# **Rhino Hardwood Care & Maintenance**

The use of Swiffer type implement to lightly clean the dust and debris off your floor is best. We do not recommend use of a “wet” mop. The use of oil based soaps or cleaners with ammonia are also not recommended and can affect the finish of your floor. Vacuums without beater bars is also a great way to keep hardwood free of debris and helps with hardwood that has lots of texture.

Floors that come with oil finishes, please refer to the care instructions in the boxes.

Another great way to keep your floors looking great is to limit the amount of direct sunlight that hits them. Direct sunlight will fade your floor. Also remember if you leave area rugs in places for extended periods of time, will result in your floor to fade around the perimeter of the rug.

Make sure all furniture has felt pad on the contact points of the floor. Failure to do so will result in damage to your floor.
